## Alkaline Water-vending Kiosk: Common Questions

- **How long will the water stay alkaline?**

Normally, consumers drink the water within a few days. The alkalinity normally only drops about 1 pH point after a few days, because carbon dioxide in the atmosphere reacts with the water and makes the water less alkaline. If the consumer stores the water and never opens it to drink it, the 9.5+ pH will last indefinitely.

- **How is the water made alkaline?**

First, we purify the water through reverse-osmosis (R.O.); and second, we add all-natural ionic (i.e. positively charged) minerals into the water. These ionic minerals consist of Ionic Calcium, Ionic Magnesium, and Ionic Potassium.

- **What makes alkaline water hydrate better than other types of water?**

AQUA 9+ water is micro-clustered water, which means that the water is made up of small chains of H<sub>2</sub>O molecules, therefore, penetrating our body cells very easily and hydrating our body faster. Other types of water, like spring water, have a difficult time penetrating our body cells, because these types of water are made up of large chains of H<sub>2</sub>O molecules. Under the “Effects of AQUA 9+ Water on the Blood” page (p. 6), one can see the tremendous hydration impact to our body on a cellular level.

- **What kind of filtration process is used to purify the water?**

The filtration process used is called reverse-osmosis (R.O.), which removes 99.9% of all contaminants, heavy metals, fluoride, etc.

- **What’s the difference between the 8.0 pH and 9.5+ pH water?**

The 8.0 pH water is similar to spring water quality. However, if one wants to experience the true health benefits of alkaline water, drinking the 9.5+ pH water is most beneficial.

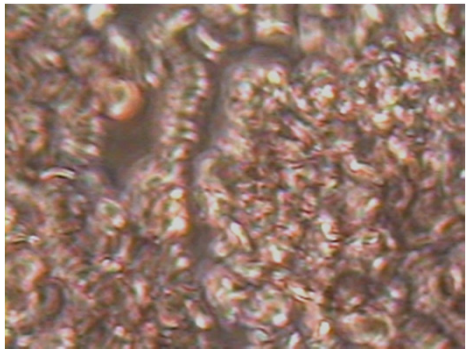

- **What does the high pH water do to the body?**

We cannot make any health claims; however, we have many anecdotal testimonials of consumers health improving as a result of drinking our water. A few of the testimonials are shown under the “Testimonials” page (p. 7). The benefits that consumers experience from drinking our alkaline water can be seen on the following video, titled, “10 Benefits of Drinking Alkaline Water:” <https://www.youtube.com/watch?v=gTAHHnAPdc>.

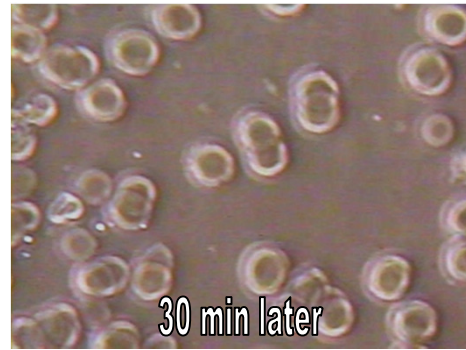

## Alkaline Water-vending Kiosk: Common Questions (cont.)

- **Is the high pH good for children?**  
Yes, our 9.5+ pH water is good for children, because it helps with the health and growth of their bones and teeth.
- **Is the high pH good for pets?**  
Yes, our 9.5+ pH water gives pets a healthier, shinier and thicker coat. It also helps reduce flea bites and itching.
- **Is the high pH good for people on medication?**  
Yes, our 9.5+ pH water helps absorb the medication into the body more effectively.
- **What's the difference between purchasing alkaline drinking water from the water-vending kiosk versus purchasing alkaline drinking water in the prepackaged bottles from the store shelves?**  
First, the 9.5+ pH alkaline drinking water from the water-vending kiosk only costs \$2.00 per gallon; whereas, the alkaline drinking water in the prepackaged bottles costs on average between \$4.00 & \$5.00 per gallon. Second, consumers enjoy purchasing large quantities from the water-vending kiosk for home use (e.g. for making beverages, such as, coffee and tea, as well as, for cooking and baking). The water sales from the kiosk enhances the store's bottled water sales, because consumers still like to purchase the smaller prepackaged bottles and drink alkaline water on the go.
- **Is it okay to store alkaline water in a plastic container?**  
Yes, the plastic containers are normally BPA-free; meaning, the plastic will not leech into the water. Therefore, the plastic containers can be re-used over and over again. Just a word of caution, however; do not store the plastic containers directly in the sun.

# Testimonials

I've been on blood pressure medication for the past 3 years. Luckily, I was recently introduced to AQUA 9+ alkaline water. Over the past month, I've noticed my blood pressure getting lower – currently 115/70, was 150/95. My doctor was amazed and reduced my medication to ¼ dosage. After about 2½ months, goal achieved!!! I returned to the doctor and he told me to stop taking the blood pressure medication. No need!! My current blood pressure averages 115/75. This is the #1 alkaline water! Everyone needs it!!

- **Hank W.**

After drinking AQUA 9+ alkaline water for 3 months, I experienced weight loss, improved eyesight, and relief from digestive problems. The water also dramatically improved my appetite control and was a stepping stone to a new way of healthy food choices. I am a living testimony that this water has many benefits. I have recommended others who have also testified of the benefits. I, therefore, strongly recommend that anyone who reads this testimonial should try the water for 3 months and see if you're not amazed.

- **Edward F.**

I had high cholesterol and my skin had pigment problems. After I started drinking the AQUA 9+ alkaline water, my blood test showed regular or below levels of cholesterol, and I also get compliments on my clear skin. I love ionic mineral alkaline water, and you should too!

- **Debbie S.**

## AQUA 9+ Kiosk System Parameters

The AQUA 9+ kiosk, Model # AQ9-2000, produces high quality, fresh tasting pure drinking water and natural ionic mineral alkaline drinking water, and has a simple push button operation used to fill 1, 3 & 5 gallon sized containers. A great way to generate **additional income** for retail store locations.

### System Parameters:

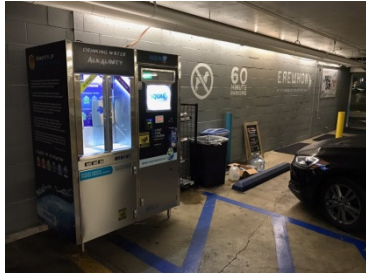

- **Capacity:** 2,000 GPD ionic mineral alkaline water system.
- **Minimum Installation Requirements:**
  - **Electrical:** plug-in (110V/15A circuit).
  - **Plumbing:** ½" inlet water line and floor drain preferred. If floor drain is not in the vicinity of the kiosk, a ¾" outlet water drain line will be installed.
- **Dispensing Water:** R.O. Pure Water and R.O. Pure Alkaline Water. We have developed an R.O. technology that will save water, and therefore, decrease the wastewater discharge to 40%. This new technology will be incorporated in kiosks that will be installed in all retail store locations.
- **Fully Automated System:**
  - Automatic On/Off water production.
  - Automatic water quality control.
  - Daily sales reports generated and made available to store personnel.
  - Pay-at-the-register set-up preferred (indoor models only); otherwise, credit card & currency operated vending will be installed.
  - two dispensing faucets.
- **Custom-designed kiosks available upon customer's request**
- **Dimensions:** 52"W x 34"D x 72"H (2-faucet kiosk), 12 sq. ft.
